Dear Mr. Mark Hall

I'm current work with WEKA. I found that WEKA has got a component WekaServer, and I can run a Knowledge Flow with it. So that, the problem of mine is I can't wait it run and click to text viewer to view the result. So that I wrote a piece of code call TextSaver (copy and modify ImageSaver). I would like to contribute my work to WEKA. If you think it's useful I will send you my source code.

Thank for reading.

Hi Thu,

Cool! I had actually planned to add a saving option to TextViewer at some stage, but a separate component is probably a better idea. Do please send my your code and I will incorporate it for the next Weka release. Are you able to give copyright to the University of Waikato?

Cheers,  
Mark.

Hi Mark

I've sent you source code. I can share the copyright to University of Waikato.

Thanks for that Thu! I've made a couple of small changes (added an "append" property so that it can append each incoming text to the file; and allowed more than one incoming text connection) and have checked it into the trunk of Weka. You can check it out from subversion or get it in a nightly snapshot.

Thanks for the contribution.

Cheers,  
Mark.
